

What do Q, Jack Ryan, and 007 have in common? Innovation Tradecraft!

Project Title	What do Q, Jack Ryan, and 007 have in common? Innovation Tradecraft!
Project Summary	Help us create and innovation in National Security Playbook, training materials, and educational games to help the Intelligence Community hone our skills in moving from problem to solution to implementation.
Country	United States

Project Description

You may already be familiar with CIA, NSA, and FBI, but did you know that there are 16 federal agencies in the Intelligence Community? The Office of the Director of National Intelligence (ODNI) helps these agencies work in more integrated function, share lessons learned, and move forward together. Within ODNI, the Office of Transformation and Innovation is leading the IC on topics that will be game changers in the 21st century, such as augmenting Intelligence with machines and improving how the IC partners with the private sector. We are looking for 1-2 virtual interns to support these efforts. Namely, you will be helping us to create an Innovation in National Security Playbook that covers best practices in everything from makerspaces to pitch competitions to virtual interns. You will also help us develop training materials for IC officers to hone their innovation and creativity skills, ranging from briefings to short videos to games.
